

Indumart Valves and Manifolds are high pressure valves suitable for shutting-off the impulse line and for mounting to pressure instruments. They are mostly used in oil, gas, chemical, petrochemical, power generation and processing industries.

These rigid valves are bubble-tight and can operate in high pressure and high temperature processes.

They are available both in stainless steel and carbon steel. The inlet and outlet maybe male, female or compression tubing; please enquire. Products in accordance with NACE MR01-75 are also available upon request.

## Manufacturing and Testing Standards:

ISO9001 quality system for manufacturing and supply.

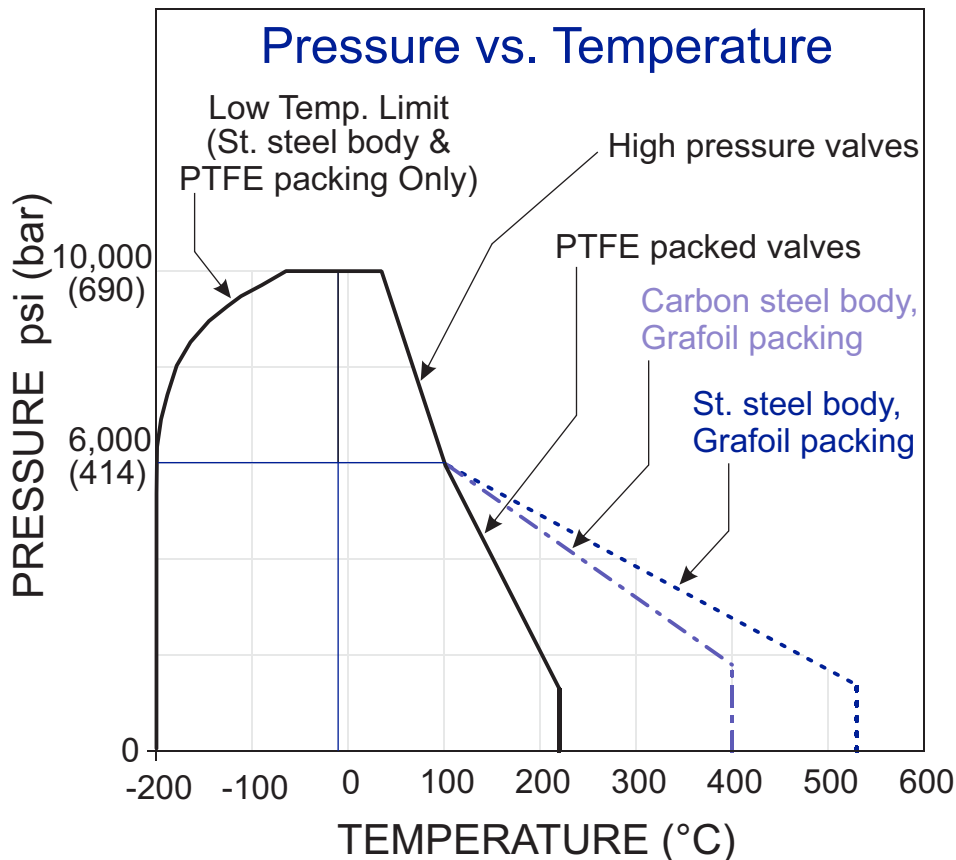

ANSI/ASME B 1.20.1-1983, ANSI B 16.34

## Raw Material and Material Certification:

Forging: ASTM A 105, ASTM A 182 F 304, F304L, F316, F316L

Casting: ASTM A 351

Bar Stock: ASTM A 479-304, 304L, 316, 316L

**Note:** No allowance has been provided for corrosion. It is the user responsibility to determine the effects of fluids on the materials used, which will affect the products' rating.
